LEFT-FOOT ACCELERATOR

The left-foot accelerator was developed as an alternative choice to hand-controls enabling people with only the use of their left foot to operate automatic vehicles. These vehicles can be fitted with a hinged left-foot accelerator; the original accelerator pedal is also fitted with a hinge, a cable links the hinges. To alternate between the pedals, simply press down on the raised pedal with a hand or foot and the one that is not required will automatically hinge up out of the way. Our left-foot accelerators have been Motability approved which ensures a quality product.

The picture below shows a typical left-foot accelerator fitted with cable assisted hinged pedals.
