

MULTI-LIFT -The perfect transfer solution in the car!

The MULTI-LIFT lifts a driver or passenger in and out of an ordinary car, van or truck. MULTI-LIFT can also be used as a scooter/ wheelchair lift in certain vans

The lift is powered by the electrical system of your car. A handy magnetic lift control box attached to a spiral cord allows flexible entry and exit and easy storage of the box on any metal surface. Sideways movements are done manually.

Available in various types and sizes, our "Backsaver" sling design requires no lifting in order to put the sling on.

If the lift is permanently removed, the car remains virtually unaffected, maintaining maximum resale value of your vehicle.

Installation can be done by over 400 certified Access Unlimited dealers across North America and around the world.

- Multi-Lift is adaptable to most cars, vans, and trucks.
- The lift arm weighs 23 lbs. and is easily lifted off its mounting bracket, when not in use. You can use the same lift for several cars or even home stations!
- The lift can remain on the bracket while driving or riding.
- Lifting capacity is maximum 275 lbs.

MULTI-LIFT—Is also the perfect transfer solution at home!

MULTI-LIFT can also be used indoors in bedrooms, bathrooms etc. and is operated in the same way as in a car.

A wall mount is installed where the lift is to be used. The lift can be adjusted to different heights.

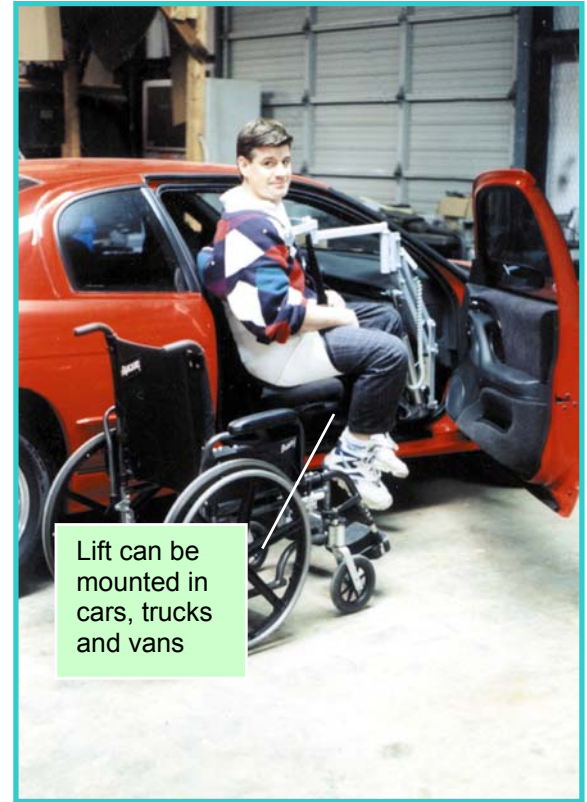

The lift is powered by a transformer at each wall mount station.

The lift can be used for lifting the person from the wheel chair to the bed toilet, bath or any area.

Lift extensions and adapters are available to cover a wider area or where room is tight.

MULTI-LIFT is compact-only 22 1/2 " long by 4" wide.

The MULTI-LIFT at home or in the car is a practical and money-saving solution.

Lift can be mounted in cars, trucks and vans
